

We noted an article in Truckinginfo.com about the DOT looking for additional safety measures for Haz-Mat Security. Glentel is a Wireless Solutions Integrator that specializes in Fleet Management with real time satellite (MSAT) capabilities. We offer two separate products that may meet your requirements for vehicle tracking and anti-theft devices:

1. Glentel/Traxis is a Fleet Management solution that can not only track vehicles in real time but can monitor driver performance as well. It is one of very few Fleet Management Solutions that offers legal DOT Drivers Logs in electronic format. The benefit to the trucking company is that the Traxis software provides a real Return on Investment in a very reasonable amount of time. Check out our website at [www.glentel.com](http://www.glentel.com). Click on Fleet Management in the Canadian site.

2. For anti-theft devices we market a new system called BULLDOG, a trailer security system. It is an innovative new product providing remote security systems specifically for use in the cargo transportation industry. This also has a benefit to the trucking company in that the Bulldog system can reduce insurance premiums and deductibles. See [www.bulldog-tech.com](http://www.bulldog-tech.com).

Thank you for your time. If you have any questions I would be pleased to take your call.
